Present

HEAD OF PLATFORM

Mave | Tel Aviv

Employee #1, responsible for building the company's end-to-end product execution pipeline from ideation to production. Built the platform from scratch while defining the architecture, standards, and practices behind it. Partnered across product, design, R&D, and QA to drive technical decisions and scalable execution.

SOFTWARE ARCHITECT

8fig | Tel Aviv

Owned critical product systems end to end, building the company's design system and turning ambiguous ideas into production-ready features. Re-architected the back-office platform and rebuilt the main dashboard, reducing load times from 8+ seconds to near-instant. Also set frontend quality standards, mentored engineers, and shaped the engineering interview process.

GROUP LEAD

Riverside | Tel Aviv

Joined as the sole engineer on the Editor team and rebuilt a neglected product from scratch, creating a stable foundation for scale. Partnered with leadership on the roadmap and long-term vision, and introduced a clear workflow for feature scoping, delivery, and approval across teams. Also built the engineering interview process and served as technical and execution lead as the product scaled from roughly 100 users to nearly 1M.

SENIOR FRONTEND ENGINEER

StreamElements | Tel Aviv

Early engineer during the company's formative stage, building multiple products from scratch and leading rapid pivots as market conditions and priorities changed. During COVID-19, remained the sole engineer in the department after a major downsizing and owned critical initiatives during a high-pressure period. That work became foundational to the company's later growth, scale, and \$100M SoftBank investment.

FRONTEND ENGINEER

TGS | Petah Tikva

Frontend engineer on a complex, high-traffic travel engine used by major airline customers, including EasyJet and Singapore Airlines. Built a white-label frontend architecture for multiple enterprise clients.

SUMMARY

Software engineer with nearly 8 years of experience building and scaling products, leading frontend development, and improving performance, usability, and execution quality. Experienced in rebuilding core products, shaping execution across cross-functional teams, and turning complex ideas into reliable, high-impact user experiences.
